

Supplementary file S2

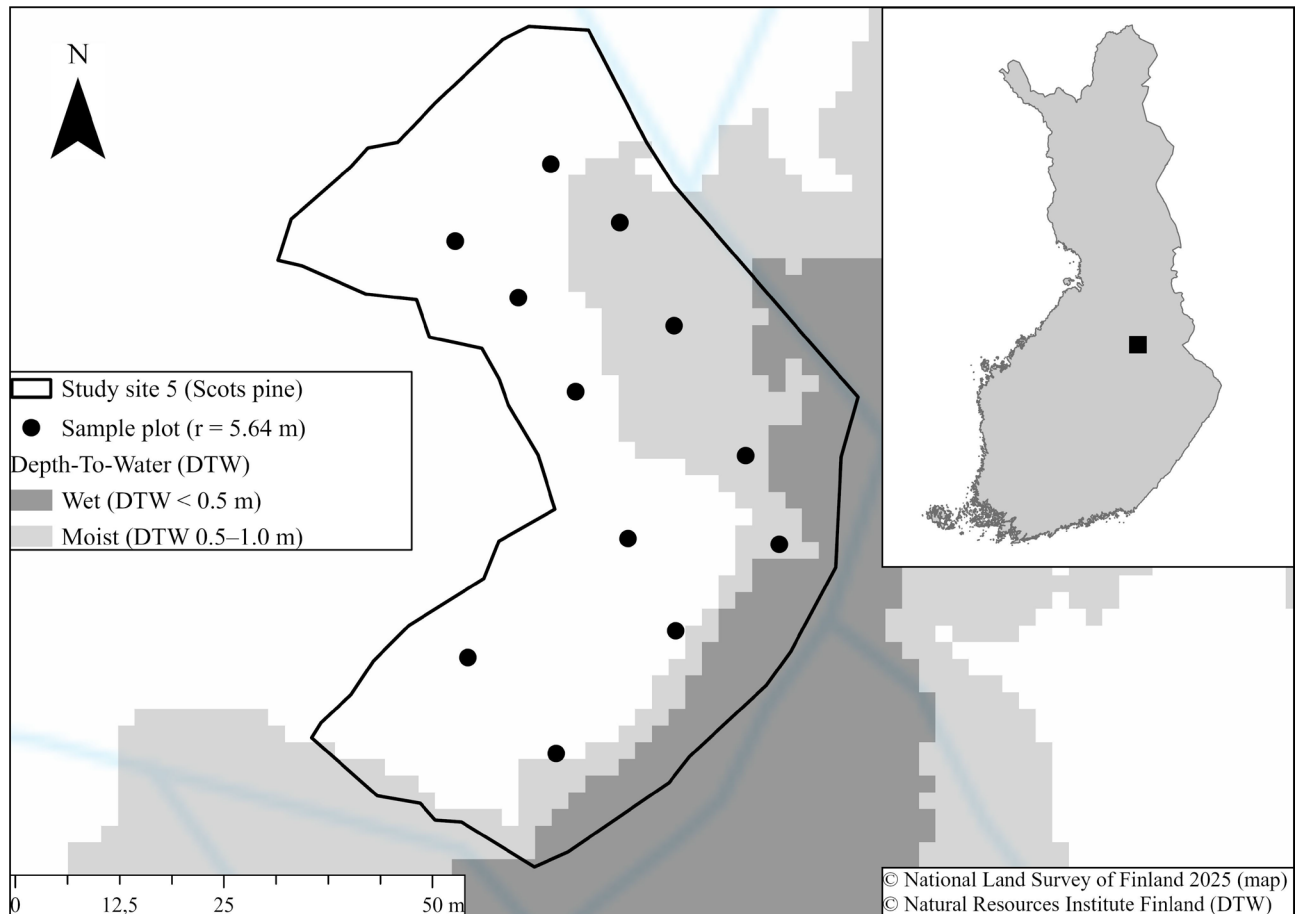

Figure S2. Example of the study design at site 5. In 2022, all planting spots were measured and evaluated. In the follow-up measurements (2023 and 2024), seedlings were measured in permanent circular sample plots ($r = 5.64$ m). The map also includes a depth-to-water (DTW) index layer. The map was created using ArcGIS Pro (version 3.1.0).
